16:1 BALUN TRANSFORMER, 10 to 40 MHz

BA-161

Case Size: 2½" x 2½" x 1½"

Designed around the Mini-Circuits TC16-161TX+ transformer, this balun is ideal to match the high impedance of an HF TFD antenna to 50 ohm coax. Packaged in a NEMA-4 weather tight enclosure for long life, this balun is a receive-only device with a maximum power rating of 250 mW.

Performance is excellent with one fourth the insertion loss of other TFD baluns available on the market and a much flatter output impedance over its operating frequency range.

Fully assembled and tested:

BA-161 Price: \$91.35
